The Willamette River is important to the citizens of Portland and Oregon. It is time that corporate/industrial damage over the years is mitigated and paid for by those who are responsible!! It is critical now and for generations to follow. Let us leave a legacy of a clean river to our descendants!

- * remove as much contaminated sediment as possible from this area, beyond what is required in Alternative G of the Feasibility Study.
- * limit the amount of Monitored Natural Recovery throughout the site.
- * have fish that are safe to consume, without raising cancer risk for people, when the cleanup is complete.
- * utilize capping technology, where clean materials are put over contaminated sediments to hold them in place only where it is technically feasible, and where it will never impede navigation. We must also realize that capping has costs for the long-term with perpetual monitoring that adds to the cost of such measures.
- * ensure that when sediment is removed from the river in this area, that it is disposed of safely.
- * ensure that polluters pay for their full share of the Cleanup.
